4. Python Exercises: sets

Write a program that declare a global set like this:

```
myset = set()
```

The program interacts with the user through this menu:

1. Display all items

2. Clear

3. Add an item

4. Remove an item (avoid runtime errors)

5. Pop an item (avoid runtime errors)

6. Check if an item exists

7. Add some fruits { "apple", "banana", "cherry", "lemon" }

8. Subtract some big-techs { "google", "amazon", "apple", "microsoft"}

9. Display all items in capital letters

10. Exit
